

Blasting contractor

Kjell Foss AS is a major contender in the blasting industry with broad and extensive experience, large capacity and highly skilled employees.

We perform a variety of services related to rock drilling and blasting, from drilling bolt holes and removing rocks in landscaping to large production projects for infrastructure, industry and quarries. Our services include:

Blasting projects for

- Garage, cottage and residential plots
- Industry and quarries
- Road and rail projects
- Wharfs, wind parks and power plants

Rock splitting

Hydraulic rock splitting without the use of explosives. Suitable for removing rocks in basements or other places where blasting is too dangerous.

Drilling projects for

- Face drilling, stitch drilling and contour drilling
- Bolt drilling
- Excavation
- Subsoil drilling for rocks

Workshops

Maintenance and repair of drilling vehicles and heavy machinery.

Our skilled and service-minded employees have large capacity and complete the job quickly with short lead time!

About the company

The company was founded by Kjell Foss in 1966 and is currently a wholly-owned family business with several subsidiaries and sister companies with more than 100 employees. Kjell Foss AS is a member of the Norwegian Association of Heavy Equipment Contractors and the Norwegian Mineral Industry. We have close collaborations with suppliers and consultants in the fields of drilling and blasting.

Our head office is located in Re, Vestfold. The company has robust financial strength and liquidity. We perform assignments all over Norway and have branches in Troms, Nordland, Trøndelag, Møre and Romsdal as well as Eastern Norway.

For customer references see page 10-15. You can also find more at www.kjellfoss.no

Our staff

Our most important asset is our staff. The company has many experienced and skilled employees who have been involved in almost every type of drilling and blasting project. Kjell Foss AS are set to have the top professionals in the industry, and we are committed to enhancing and developing our employee skills at all time.

Kjell Foss AS is also committed to recruitment and the future health of our profession, which is why we take in new apprentices in our companies every year.

Machinery

In our own modern machine park, we have over 50 drilling rigs, and 1 40-tonne digger with a hydraulic breaker. If necessary, we can enlist more than 70 drilling rigs through our partners. We have five types of drilling rigs ranging from small wheeled drilling rigs to large production rigs and diggers with hydraulic breaker. The drilling diameter of these rigs range from 35 mm to 115 mm.

In addition, we also have several compressors, hand-held drills, rock splitting machines and other equipment for small and less complex assignments.

HSEQ

At Kjell Foss AS we are proud of our employees, our customers and the machines we use in our work. We nourish these values through a unified and integrated management system, that consists of HSE, quality and risk management. The management system is constantly evolving and is implemented in our organization and in our culture.

The system specifies the requirements we set for our projects, and contains internal requirements, customer requirements and legal requirements. We have a strong desire for all our employees, our customers and the community around us to feel that we deliver services and products that we are proud of every day. Our projects are completed in a safe and efficient manner with high quality. At Kjell Foss AS we are convinced that a strong HSEQ focus is good for business. We make necessary preventative measures to create safe and effective workplaces, preventing accidents and achieve a healthy work environment. We work hard to ensure that our reputation and daily work is characterized by our values, our policy and our goals.

In 2019 Kjell Foss AS, with its sister- and subsidiary companies, was certified as an Eco-lighthouse.

The environmental management system helps to reduce the organisation's negative impact on the environment. This includes energy consumption, waste management, resource planning, etc.

References

Asko, Hanekleiva

Kjeldaas AS

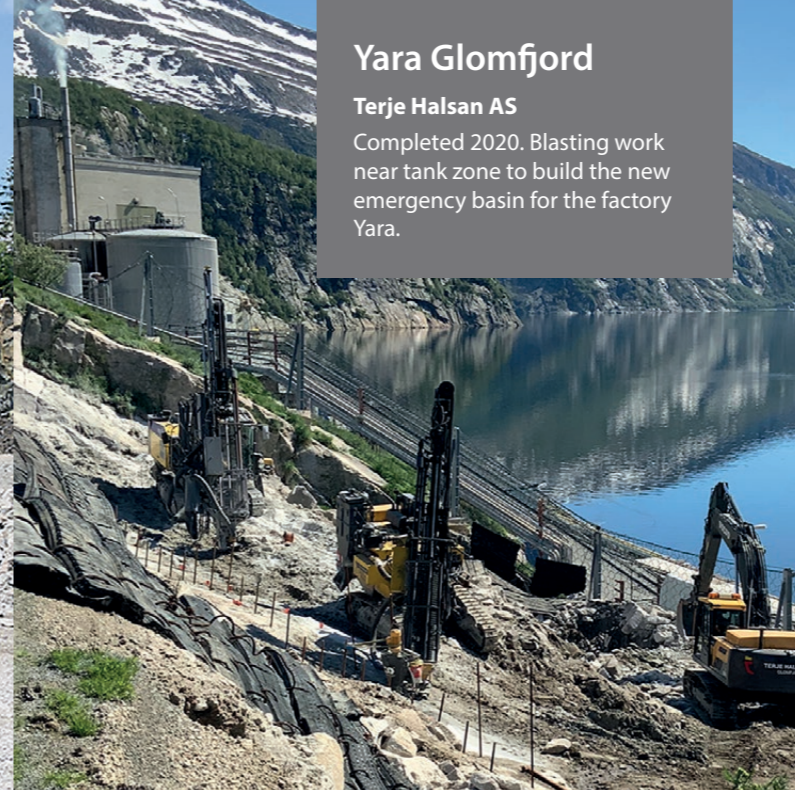

Completed 2018–2020. Blasting a retention pool and building plot. Drilling seams and drilling for bolts (rock stabilisation and foundations). Blasting for building plot and construction pit with culvert. Electronic ignitor system. We constructed the building with infrastructure at the same time.
